Education

University of Iowa

Electrical Engineering (BSEE) – GPA: 3.1/4.0
Minor in Computer Science

Dec. 2027

Experience

Manufacturing Electrical Engineer Co-Op, *Collins Aerospace* – Cedar Rapids, IA Jan. 2025 – Aug. 2025

- Updated product test requirement documents, ensuring compliance with revised specifications and improving test clarity and repeatability
- Used root cause analysis to resolve test system issues by troubleshooting cables and equipment with wiring diagrams and multimeters; also ensured test station backups were functional and available to prevent production downtime
- Gathered and tested nonconforming parts; compiled and presented failure data for quality engineers to support root cause analysis, corrective action, and recovered over \$160,000 in part cost
- Mentored a peer by delegating tasks and offering technical support
- Contributed to a circuit board re-spin, supporting validation efforts by creating an engineering markup for a custom adapter board used in test; collaborated with design engineers to finalize documentation
- Coordinated resolution of recurring component failures by testing parts and working with component engineers, supply chain, and vendors to drive specification updates and prevent future issues

Software Engineer Intern, *Casey's* – Ankeny, IA May 2024 – Aug. 2024

- Developed and optimized SQL queries in SQL Server Management Studio (SSMS), including tracking beverages shipped from distribution center to 50+ stores and created stored procedures for data filtering
- Assisted in data migration for 2600+ stores and 3 distribution centers to/from order prediction software
- Used C# to update calculations, create conversions and build tests to validate data within business software
- Used Agile and Scrum development processes to successfully resolve 30+ Kanban board tickets, comprised of user stories and bugs
- Collaborated in pair programming/mobbing sessions with multiple teams to deliver software more effectively and efficiently
- Shipped code using Git and Azure DevOps and branched code with trunk-based development

Information Technology Intern, *Republic Electric Company* – Davenport, IA June 2023 – Aug. 2023

- Front-end development for business software using JavaScript and Infor
- Assessed and troubleshooted computer problems brought by 10+ employees
- Maintained and serviced computer hardware, including drives, servers, and network systems

Skills

Languages: Java, C++, SQL, C# (familiar, used in Summer 2024 internship)

Tools: Git, Jira, Azure DevOps, Visual Studio, CLion; multimeter, oscilloscope, power supply

Other: Microsoft 365, SAP, PDM
